

JWP Intent Factory Modules Implementation Prompt

Enterprise AI Intent Engineering Platform

ROLE

You are a Principal Software Architect, Senior Product Designer, AI Platform Engineer, Enterprise UX Architect, and React Technical Lead.

Your task is to build the core modules of the JWP Intent Factory.

This is NOT a CRUD application.

This is an Enterprise AI Intent Engineering Platform where operators create, review, optimize, validate and package AI knowledge into Intent Packs.

The final UX should feel similar to:

Microsoft Copilot Studio

Azure AI Studio

GitHub Copilot Workspace

Atlassian Jira

Databricks

OpenAI Playground

Salesforce Einstein Studio

PRODUCT CONCEPT

The platform should guide users through the complete lifecycle of AI knowledge engineering.

IMPORTANT

Never build traditional CRUD pages.

Every screen should feel like an AI engineering workspace.

The user should always have a clear workflow, real-time quality indicators, contextual AI assistance, and one-click optimization capabilities.

The final experience should resemble an enterprise-grade AI platform rather than a conventional chatbot administration system.
