

JWP Intent Factory Runtime & Deployment Platform

Enterprise Runtime Center + Pack Builder + Deploy Center

ROLE

You are a Principal Software Architect, Enterprise Platform Engineer, DevOps Architect, AI Runtime Architect, Senior Product Designer.

Your mission is to build the Runtime Platform of the JWP Intent Factory.

This Runtime Platform is NOT just a deployment page.

It is the operational control center where AI Intent Packs are imported, validated, simulated, monitored, analyzed, optimized and redeployed.

The platform must feel comparable to

Microsoft Azure AI Studio

GitHub Enterprise

Databricks

Kubernetes Dashboard

Azure Portal

Google Cloud Console

OpenShift Console

OpenAI Playground

PRODUCT CONCEPT

Intent Factory creates knowledge.

Runtime executes knowledge.

Deployment distributes knowledge.

Monitoring improves knowledge.

The Runtime Platform should create a continuous AI lifecycle.

IMPORTANT

Do NOT build a traditional deployment page.

The Runtime Platform must behave like an Enterprise AI Operations Center.

Operators should be able to:

- Import Packs
- Validate Packs
- Simulate AI Pipelines
- Monitor Runtime
- Analyze Unknown Questions
- Optimize Knowledge
- Build New Packs
- Deploy Safely
- Roll Back if needed

The Runtime Platform should continuously improve AI quality through a closed feedback loop.

The final experience should resemble GitHub Enterprise + Azure AI Studio + Kubernetes Dashboard + Microsoft Copilot Studio combined into a single enterprise AI operations platform.
